TITLE : STRUCTURE FOR HIGH-FREQUENCY
SHIELD CASE

ABSTRACT : PROBLEM TO BE SOLVED: To provide a structure for high-frequency shield case, which can reduce the number of attached members as much as possible, and has a sufficient shielding effect.

SOLUTION: Recessed sections 4 are formed on the parts of a shield case 1 which come into contact with a shield cover 2 and projecting sections 5 which can be inserted into the recessed sections 4 are formed on the shield cover 2. At the time of covering the shield case 1 with the shield cover 2, the four corners of the case 1 and both ends of the edges 22 of partition walls 16 are fixed with set screws 3 through the shield cover 2. Since the projecting sections 5 are inserted into the recessed sections 4, the airtightness between the case 1 and the cover 2 can be improved from the conventional example and, accordingly, the number of the set screws 3 can be reduced.
